\*The ONT supports a maximum of 16 VLANs, 15 for general purpose and 1 for management. The 15 general purpose VLANs can be assigned to any of the ONT's physical interfaces (4 Ethernet ports, 8 SSIDs, and the VOIP interface for the POTS port) available on the ONT. The ONT's physical interfaces operate in access mode, therefore, they can only carry untagged traffic of a VLAN. A VLAN can be assigned to one or multiple physical interfaces simultaneously.

\*The ONT features a special option, vlan binding, which allows configuring one of the Ethernet ports in trunk mode to carry tagged traffic from multiple VLANs simultaneously. VLANs configured on this port cannot be used on another interface.
